PROFESSIONAL SUMMARY

Motivated first-year undergraduate student passionate about Artificial Intelligence, automation systems, IoT, web development, and emerging technologies. Hands-on experience building AI-powered tools, automation workflows, web applications, and hardware-based projects. Strong interest in Generative AI, operating systems, embedded systems, and full-stack development with continuous project-based learning.

EDUCATION

First Year Undergraduate Student

Expected Graduation: 2029

NIAT in collaboration with Aurora Deemed to be University

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, SQL, HTML, CSS

Frameworks & Technologies: React.js, n8n Automation, Prompt Engineering, AI Chatbot Development, Telegram Bot Integration

Technical Domains: Artificial Intelligence, Generative AI, IoT, Database Management Systems, Web Development, Automation Systems, Embedded Systems, Operating Systems

Tools & Platforms: Git & GitHub, VMware, VS Code, Ollama, Windows OS

PROJECTS

Prompt Wars & Project Two

[\[Demo 1\]](#) [\[Demo 2\]](#)

- Engineered interactive prompt-engineering platforms to showcase iterative AI responses and reusable prompt patterns.
- Optimized platforms for faster iteration, improved user inputs, and advanced chatbot outcomes.

My First Project

[\[Live Demo\]](#)

- Built a responsive frontend web project demonstrating core UI fundamentals, clean architecture, and maintainable code structure.

AI & Automation: n8n Telegram Agent & Chatbot

- Designed and deployed an automation-powered Telegram AI agent utilizing n8n workflows for reliable input handling and AI-driven responses.
- Implemented an AI chatbot integrating conversational logic with automated routing and dynamic responses via n8n.

Hardware & Systems Engineering Projects

- IoT & Embedded:** Executed sensor-based experiments and automation projects, exploring real-world constraints for embedded systems.

- **Memory Simulation:** Simulated NAND flash programming and erasing cycles to analyze and understand memory behavior.
- **RC Car Optimization:** Constructed a custom off-road RC car system, integrating motors, batteries, and frame components while optimizing performance.

QR Code Generator

- Created a web-based QR code generator application with a focused, user-friendly interface.

CERTIFICATIONS & ACHIEVEMENTS

- **Certifications:** Tata Forage, Base44 Workshop, Ben10X, Gen AI Academy by Google (Participant), Hack2Skill (Participant).
- **Open Source & Community:** Active GitHub contributor with multiple deployed projects and iterative improvements.
- **Languages:** English, Telugu, Basic German.
